

Roland VersaCUT 68" & 100" Manual Print Trimmers
 Roland VersaCUT CR 72" Crank-Assisted Print Trimmer

THE PERFECT FINISH

**Trimming prints
 on flexible or
 rigid materials
 has never been
 so easy, precise,
 or affordable.**

Affordably priced, the VersaCUT from Roland is the industry's only line of print trimmers engineered specifically for graphics production, bridging the gap between hand units and fully mechanized trimmers. With VersaCUT, you can quickly and easily trim printed graphics for the precision results your customers need.

Custom Built for Your Roland Business

The VersaCUT addresses the unique needs of graphics production and sign-making shops. With lightweight aluminum construction for portability, stainless steel reinforcement for durability and stability, and rust and corrosion resistance for long-term performance, the VersaCUT series is a valued addition to any production environment.

Choose from Two Models

VersaCUT is offered in two models to support Roland's entire inkjet line-up. The VersaCUT manual trimmer is available in 68" and 100" widths, and is available with an optional stand that features a roll holder to support printed graphics.

The 72-inch, crank-assisted VersaCUT CR model features an exceptional cutter head and enhanced clamping mechanism for outstanding overall cutting performance. For added convenience, the VersaCUT CR can be bolted or clamped to any workbench or table, and is portable for easy storage and maintenance.

Cuts a Wide Range of Substrates

Designed to transition easily between flexible and rigid substrates, the VersaCUT line allows you to quickly trim printed graphics for precise results. The manual VersaCUT produces perfect, repeatable cuts on a wide variety of materials including vinyl, paper, canvas, Coroplast®, Fome-Cor®, Gatorfoam™ up to 9 mm or 3/8" thick. The crank assisted VersaCUT CR supports expanded PVC, Komatex®, Celtec® and Sintra® up to 6 mm or 1/4" thick, as well as Fome-Cor, Gatorfoam and Coroplast up to 12 mm or 1/2" thick.

Easy to Operate

The VersaCUT line delivers the precision you need without the complexity or added cost of a motorized unit. With a pneumatic clamp requiring only 35 psi of compressed air*, the VersaCUT CR is capable of cutting through some of the thickest substrates.

Convenient Cutter Head Design

The VersaCUT base model features a single-blade cutter head that supports inexpensive, quick change blades. For the redesigned VersaCUT CR, a single-blade cutter head for high-speed cutting of low-density materials is included, as well as a triple blade cutter head for high-density substrates. VersaCUT cutter heads are designed for safe handling and the blades are easy to change. Replacement blades are priced at just \$0.15 each for the VersaCUT and \$0.29 each for the VersaCUT CR.

CR model requires just 35 psi of compressed air to securely clamp materials

CR model attaches easily to any table

CR model easily trims Coroplast up to 1/2" thick

Innovative blade design

The Roland VersaCUT Series Print Trimmers

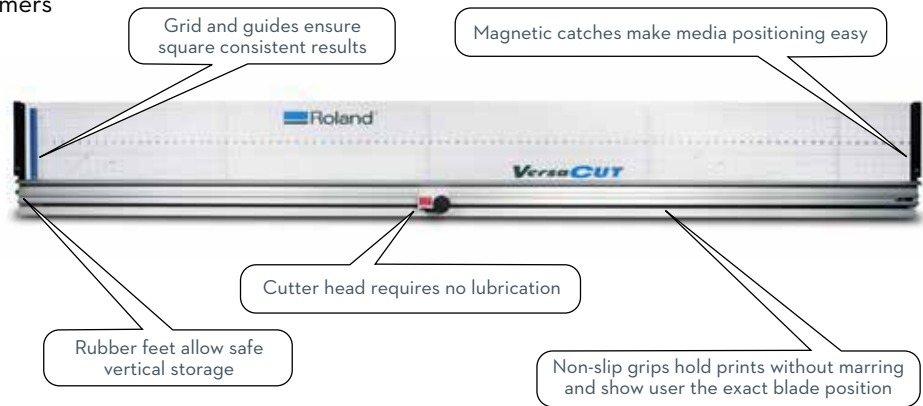

The VersaCUT series from Roland is the best designed print trimmer line for the sign industry. Incorporating many innovative features, VersaCUT trimmers are an easy-to-use and cost-effective solution that allows sign, screen printing and print-for-pay shops to greatly reduce materials waste and production costs typically associated with hand cutting methods.

VersaCUT

manual print trimmers

Features designed for graphics professionals

- Available in two sizes - 68" and 100" widths
- Easily cuts Coroplast, Fome-Cor®, Gatorfoam up to 3/8" thick
- Transitions from rigid to flexible substrates with no change in setup
- Blade position is easy to see, so you know exactly where the cut will be placed
- Precise alignment and grid ensure square, consistent cuts
- Utilizes inexpensive, quick-change blades
- Includes a one-year limited warranty

Grid and guides ensure square consistent results

Magnetic catches make media positioning easy

Cutter head requires no lubrication

Rubber feet allow safe vertical storage

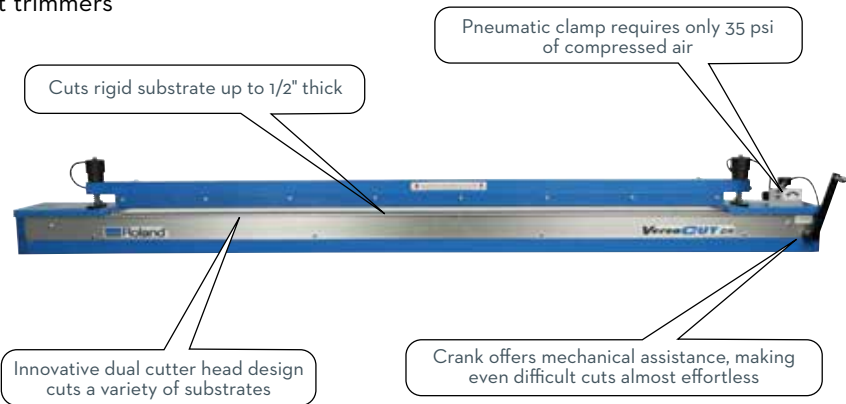

Non-slip grips hold prints without marring and show user the exact blade position

VersaCUT CR

crank operated print trimmers

A cost effective solution for trimming mounted prints

- 72-inch width
- Unit allows for easy installation and operation
- Portable design allows for the unit to be bolted or clamped to any workbench or table
- Low-cost alternative to power cutters
- Cuts a wide range of substrates
- Single-blade cutter head is included for high-speed cutting of low density substrates such as Fome-Cor®
- Triple-blade cutter head for accurate cutting of high density substrates such as Sintra®
- Durable industrial components
- Front fence guard allows for safe operation
- Includes a one-year limited warranty

Cuts rigid substrate up to 1/2" thick

Pneumatic clamp requires only 35 psi of compressed air

Innovative dual cutter head design cuts a variety of substrates

Crank offers mechanical assistance, making even difficult cuts almost effortless
